

“ WHEN IT COMES
TO EROSION CONTROL
YOU GET WHAT
YOU PAY FOR. ”

ONLY PROFILE® MULCHES MAKE YOU MONEY ACROSS YOUR ENTIRE PROJECT. **AND WE CAN PROVE IT!**

REDUCE INSTALLATION COSTS— better performance from bag to ground

Profile's hydraulic mulches require less soil preparation and lay down faster. Featuring Thermally Refined® wood fibers, they mix more easily and completely in the tank, and stay in suspension for smoother and longer shooting. Delivering the industry's greatest yield, they allow you to cover more ground per bag.

ELIMINATE CALLBACKS— best-in-class soil protection means less time on site

Eliminate time and costs associated with improper coverage or inferior products that are susceptible to washouts. Profile's Thermally Refined fibers provide more interlock to resist rainfall impact and overland flow. By keeping more soil on site, with greater moisture retention, you're assured better results, faster.

MAXIMIZE WATER USE— capture and retain more moisture

Designed with the industry's highest water-holding capacity, Profile's hydraulic mulches create interlocking matrices that hold more water. They ensure seed, mulch and soil contact, even on the most severe slopes for faster, more robust plant development. Their lofty matrices capture rainfall over and over for maximum erosion control, accelerated plant development and reduced run off.

Combining agronomic and engineering expertise, Profile Products manufactures a broad array of cost-effective and earth-friendly solutions to meet an ever-growing range of needs. Ensuring you more successful erosion control through faster and denser vegetation establishment, Profile® helps you achieve better results and opportunities for growth. See the proof—from inside the lab and out in the field—at **www.profileproof.com**.

GET PAID FASTER—
achieve quicker, more complete vegetation

Profile's hydraulic mulches are proven to accelerate vegetative establishment. Faster establishment means faster regulatory compliance, faster project sign off and the faster you get paid.

PROTECT THE ENVIRONMENT—
assure and maintain compliance

Proven to be your most environmentally-friendly options:

- 100% biodegradable
- 100% recycled wood fibers
- Phyto-sanitized weed free wood fibers
- Naturally derived biopolymers
- 100% non-toxic, no heavy metals
- No nettings, threads or staples to endanger wildlife

“ABSOLUTELY THE
MOST EFFECTIVE
HYDRAULICALLY APPLIED
”
MULCH AVAILABLE.

HP HIGH PERFORMANCE

Next generation Flexterra® High Performance-Flexible Growth Medium™ (HP-FGM™)

Proven to surpass all hydraulically applied mulch products and rolled erosion control blankets.

-  • Revolutionary and patented Micro-Pore technology optimizes water retention for faster, more complete vegetation establishment
-  • 100% recycled Thermally Refined® wood fibers mix easier and cover more ground per bag
-  • 100% biodegradable interlocking fibers provide mechanical interlock for immediate erosion control
-  • 100% non-toxic biopolymers enhance performance and contribute to environmental compliance
